# OUR STORY

For over 45 years, CIS has followed a simple philosophy; integrity, proficiency, and exceptional workmanship. This concept is carried throughout all our divisions: service, installation, design and engineering. This commitment to our philosophy has propelled CIS' growth for over 45 years. As we continue our growth our commitment remains the same, to provide unsurpassed customer service, exceptional communication, and competitive pricing. As a result, you can be assured that your project will be completed accurately, promptly and within budget.

# BETTER DIAGNOSIS / BETTER DECISIONS / BETTER RESULTS

The key to our success is our expertly trained, certified and experienced HVAC technicians along with our partnerships with the nation's leading equipment manufacturers. Our staff provides accurate estimates for the repair or replacement of your equipment to ensure that our customers achieve extraordinary results. It is mandatory that all staff receive continual education so that they are kept up to date on the latest technologies and advances in air conditioning, heating, ventilation and air treatment systems. We guarantee your complete satisfaction when your equipment is installed, serviced or cleaned. CIS will be there when you need us, period.

## Expert HVAC Project Managers

## Expert HVAC Technicians

# GENERAL MAINTENANCE AND REPAIR

## Preventative Maintenance

The purpose of preventative maintenance is to keep your HVAC system up and running all season long with no surprise breakdowns, enabling you to enter the heating and cooling seasons with the confidence that your system is operating at its maximum efficiency. Plan to schedule your preventative maintenance twice a year: once in the spring for your cooling equipment and again in the fall for your heating equipment. This is also a good time for you to ask questions about your system and bring up other issues that might need to be checked.

## Service Life/Life Cycle

Comfort Indoor Solutions understands that mechanical equipment will eventually break down. Should the equipment be beyond repair, our knowledgeable technicians can install the correct unit for your application. We will provide you with options that will fit your budget, while providing the most efficient and green equipment.

## Hail Damage

Hail can severely damage your air conditioning unit. CIS' technicians will mechanically test your system to determine if the units can be repaired by combing, coil replacement or if a total replacement is required.

# SALES, SERVICE, SYSTEM DESIGN AND CONSULTATION

## Retail and Restaurants

Our projects have included interior renovations, building additions and new construction. Our client list has included specialty retailers as well as department stores, restaurants, concert venues and strip malls. Our reputation has been built on our ability to strictly adhere to project schedules and our sensitivity to budget constraints.

## Municipalities - Public Works

Taking care of the roads, trees, parks takes a lot of time. Let CIS handle your heating, air conditioning and ventilation needs. Our trained staff can be on site when ever the need arises and at a very competitive price and can bill prevailing wage when required.

# SALES, SERVICE, SYSTEM DESIGN AND CONSULTATION

## Commercial, Industrial and Storage Facilities

CIS is a leading full-service HVAC contractor offering design-build services in the commercial, office, industrial, manufacturing, healthcare and storage industries. Our strength as an HVAC contractor has been built on our team's professionalism, commitment to client satisfaction and extensive industry experience. These valuable attributes sets the stage for project success from conception to completion and enhances the project's value.

## Religious Facilities

Religious organizations have a high rate of theft, vandalism and damage from hail. CIS is there to help. CIS has worked with 100's of religious organizations and our national discount pricing is always welcomed. Why pay more? CIS can also arrange temporary cooling when the HVAC equipment has been damaged beyond repair or is stolen.

## Air Quality

Air filters are a central, but often under-appreciated part of a central HVAC system. They don't just filter out bits of pollen and dust that would otherwise circulate through the home and lower indoor air quality. They also provide a first line of defense against larger objects such as bits of loose insulation being pulled into the system where they could cause damage or present a fire risk. But if you don't change your air filter regularly, it can turn against you. Clogged air filters are the number one cause of HVAC system failure.

## U/V Light

Contamination in HVAC units is a widespread issue that shouldn't be ignored. According to the National Institute of Health these contaminants often contribute to building-related diseases, like viral or bacterial infections, allergic rhinitis, asthma and hypersensitivity pneumonitis. But only certain UV lights can be used in air purification. The Ultraviolet Germicidal light (UVGi) can help eliminate many types of bacteria and viruses. The UVGi light operates within the UV-C spectrum, which is the effective wavelength spectrum for germicidal efficiency.
